130M+

children worldwide lack access to basic reading materials.

1. Low literacy costs the global economy $1.2 trillion per year

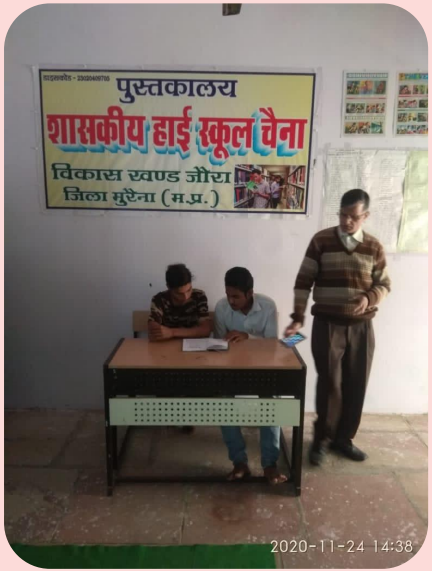
2. Children who read regularly earn up to 20% more as adults

3. Community libraries increase reading frequency by 2-3x in children

We're building libraries and tech centers for under-resourced areas in the world. Converting donations into permanent education infrastructure for developing regions.

Our mission is to make sure every single child across the world has access to books and technology

What we have accomplished



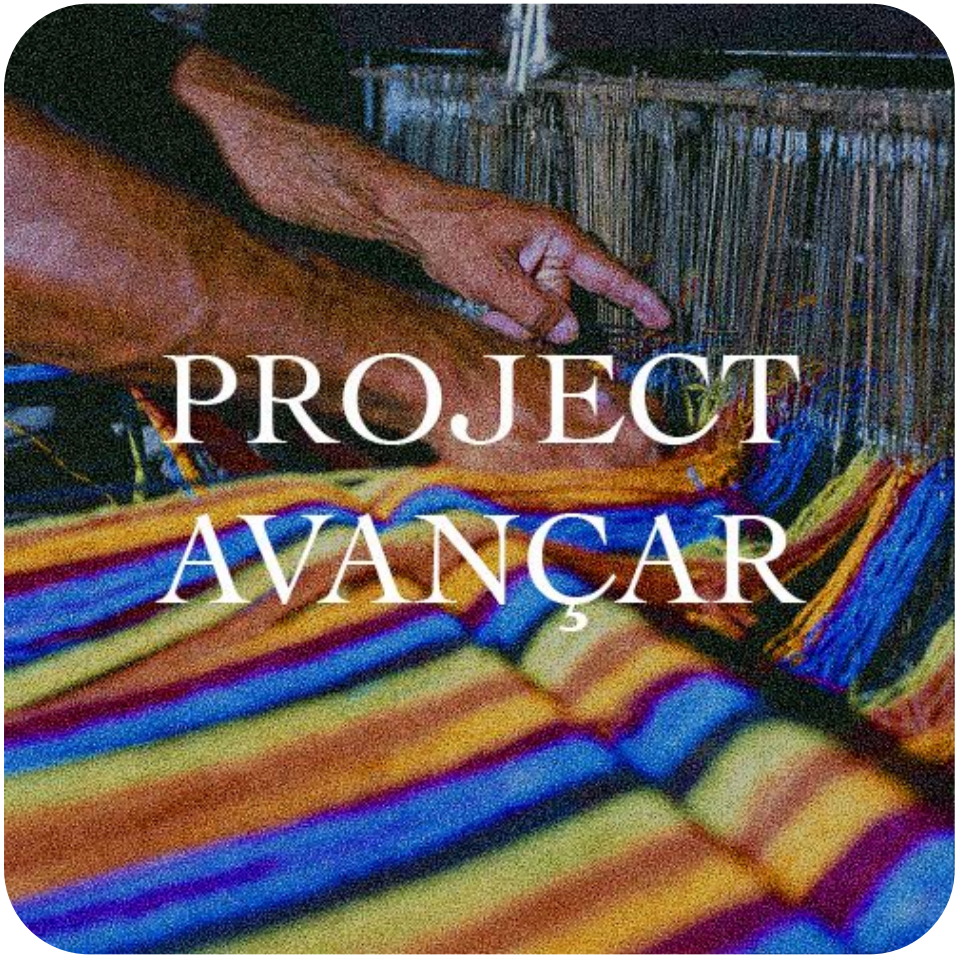
2 libraries in India

3K books donated

20+ Chicagoland community service events

In 2026, we are going to build a library in Amazonas, Brazil. We need your help for this mission:

- for travel, scoping out the village, and groundwork in Brazil
- to build a modern building in a village near Manaus
- for tech devices, books, and Starlink connection



Why Brazil?

- Two of our teammates, Lalit and Zach, visited Brazil in May 2023 on a school-sponsored, short-term study abroad trip, an experience that left a lasting impact on both of them

- Seeing firsthand the contrast in children's access to quality education compared to what we grew up with empowered us to act

How we're raising money…

- Hosting "Take a Book, Give a Book" library build sessions with corporate companies in Chicago

- Gen Z awareness building with short form content

- Partnering with Brazilian artisanal brands, introducing them to US market, and sharing proceeds.

We’ve built the team to make it happen
